

# Yuko H1 Straightening

## STEP BY STEP TECHNICAL GUIDE

### STEP 1 - CONSULTATION

Check the type of hair, chemically treated history and the damage degree differences between the roots and the hair tip.

Select appropriate solution based on hair analysis guide. Test strength of the hair when wet.

DAMAGE CONTROL	VIRGIN TO LOW DAMAGE HAIR	LOW DAMAGE TO MID-DAMAGED HAIR	MID-DAMAGED TO HIGHLY DAMAGED HAIR
HAIR STRENGTH	NOT EXTENDED WHEN PULLED	EXTENDED IF PULLED	EXTENDED WITHOUT FORCE
SOLUTION	CREAM H1		ANTI-FRIZZ
PROCESS TIME	UP TO 50 MINUTES		15 MINUTES

\*\*Above guide is a rough indication and used only as a guideline, as the hair condition and treatment history will vary on each individuals hair

\*\*For Anti-Frizz use Anti-Frizz Technical Guide..

### STEP 2 - PRE-SHAMPOO

Shampoo gently with Yuko Shampoo Series. Apply conditioner if required for entangled hair.

#### Yuko Scalp Care Shampoo/Treatment

Free from sulphate, silicones and mineral oil, artificial colouring and fragrance free.

#### Yuko Lock In Colour Shampoo/Treatment

For normal to coloured hair. Contents helps prolong the richness of colour.

#### Yuko Anti-Frizz Shampoo/Treatment

Maintain frizz-free moisturized hair all the way through the ends.

### STEP 3 - PRE-TREATMENT

Spray a generous amount of G Hair Water on the entire hair.

Spray G PPT over damaged area.

Apply G Cream Controller after G PPT over highly damaged area.

#### G Hair Water

Keep hair enriched and moisturized through maintaining water balance.

#### G PPT

Signature protein contained preparation to protect hair from chemical procedure.

#### G Cream Controller

Extra protection over highly damaged area.

## STEP 4 - SOLUTION 1

Using a brush, apply Solution 1 approx 1 to 2 cm away from the scalp, in sub sections of 1.5 to 2cm. Cover the hair with plastic wrap after applying the solution.

### Process Time

Refer to hair analysis guide used for initial consultation above.

### Solution Amount

Short Hair	80g to 100g
Semi-Long Hair	100g to 120g
Long Hair	120g to 150g

### Elasticity Check

Take strands of hair (5mm), wipe off the solution, and wrap the strands around your finger two or three times to create a loop to check elasticity.

1. If the hair reverts back to its original shape then it is not quite ready yet.
2. If the hair slightly reverts back then it is sufficient for soft straightening of mild curls or for reducing volume.
3. If it remains in the loop shape then it is sufficient for straightening of strong curls.

## STEP 5 - INTERMEDIATE RINSE

Starting from nape, rinse out solution 1 thoroughly. If chemical odor is of concern, spray G Reactor on entire hair and rinse. For strongly entangled hair apply conditioner and rinse again.

**G Reactor**  
For deodorizing and intermediate treatment.

## STEP 6 - BLOW DRYING AND IRONING

Spray a generous amount of G Hair Water and then G Heat Guard on entire hair. Blow dry the hair until it is 80 to 90% dry.

### Iron Operation

1. Take 1 to 1.5cm mid section, pull out the hair gently 90 degrees against scalp then slide the iron along hair.
2. For mid section, slide the iron along with hair streaks (hair falling direction).
3. Bundle some mid sections and iron for tip of hair. Lower the iron temperature based on hair damage level.

**G Heat Guard**  
Protect the hair from heat of hair iron and dryer.

### Iron Temperature Guide

DAMAGE DEGREE	VIRGIN TO LOW DAMAGE HAIR	LOW DAMAGE TO MID-DAMAGED HAIR	MID-DAMAGED TO HIGHLY DAMAGED HAIR
IRON TEMPERATURE	180C	150C TO 180C	100C TO 150C

## STEP 7 - SOLUTION 2 (NEUTRALIZER)

Using a brush, apply the neutralizer approx 1 to 2cm away from the scalp, in sub sections of 1.5 to 2cm. (The amount needed is the same as Solution 1). Leave treatment for 5 minutes.

## STEP 8 - SECOND RINSE

Rinse off the solution completely and apply conditioner.

## STEP 9 - FINISH

Spray G Hair Water and then G Heat Guard. Style hair with dryer. Styling by iron press makes the straightening effect last longer.

## STEP 10 - HOME CARE ADVICE

Ask the client to refrain from shampooing hair for the next 48 hours. Advise the client to do Home Care Treatment according to hair type.
